FEEDING RECOMMENDATIONS

Expected intake: 220-440 grams (8-16 ounces /50- 1lbs.) per head per day. Product should be available continuously. Locate tubs near a range locate tubs where animals congregate, near gaps or along trails. Variables in consumption could be temperature, humidity, type of animal, animal size, stage of production and animal health. The quality, source, availability of roughage and/or light grain may also affect consumption. Measure product upon first introduction to figure consumption. Tub holds approximately 3.2 kg/cm (18 lb. per inch). Increase consumption by decreasing number of head or adding another tub. To reduce consumption, increase number of head or move tubs away from congregating areas. If this fails, remove a tub. Always provide a fresh, clean source of water and free choice salt. Feeding of vitamins other than Vitamins A, D and E to cattle older than 3 months of age may not have a beneficial effect.
